No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

## Journal of Computational Physics

### INFORMATION FOR AUTHORS

The purpose of the *Journal of Computational Physics* is to publish articles concerning techniques developed in the solution of data handling problems and mathematical equations, both arising in the description of physical phenomena.

Manuscripts should be submitted to: *Journal of Computational Physics*, Lawrence Livermore National Laboratory, University of California, P. O. Box 5509, L-561, Livermore, California, 94550.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Computational Physics* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

**Form of Manuscript.** Manuscripts should be typewritten with wide margins on high quality  $8.5 \times 11$  bond paper, using double spacing throughout. The original and two copies should be submitted; however, in order to expedite handling of manuscripts, the original and four copies would be desirable. Copies should include figures and tables.

Each page of the manuscript should be numbered. The first should contain the article title, author and coauthor names and complete affiliation(s). At the bottom of this page, the number of manuscript pages, figures, and tables should be noted. The second page should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent.

With the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the American Institute of Physics.

**Subject Classification.** As of January 1981 authors are required to classify their own manuscripts using the 1980 *Mathematics Subject Classification*, reprinted from the 1978 *Mathematical Reviews Index*, pp. S27-S34, with the additional classifications listed in the January 1, 1981 issue. Authors are requested to choose at least two categories, one in numerical analysis category, 65, and one other, generally a physical classification, from the categories beyond 65. Page one should contain at least two such classification index numbers, as well as a few key words.

**Abstract.** Page 3 should contain a short abstract.

**List of Symbols.** It is of vital importance that the author submit a complete list of symbols. The symbols used should be identified for the typesetter **phonetically**. This list will not appear in print, but is essential to avoid costly corrections in proof.

**Tables.** Number tables consecutively with Roman numerals. Extensive tables will be reproduced as photoengravings, and should be typed carefully in the **exact** format desired. Authors will be charged for any new engravings necessitated by changes in proof. Use superscript lowercase italic letters (*a*, *b*, *c*) for table footnotes, which should be typed immediately below the table. Type tables at least double-spaced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to be italicized.

**Equations.** Equations should be typewritten whenever possible, and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)". Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent  $1/2$  whenever possible.

**References.** References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article, and should be styled and punctuated according to the following examples:

1. D. SCHNACK AND J. KILLEEN, *J. Comput. Phys.* **35**, 110 (1980).
2. I. GOHBERG, P. LANCASTER, AND L. RODMAN, *Matrix Polynomials* (Academic Press, New York, 1982), p. 54.
3. R. GROSS, M. KOYANAGI, H. SEIFERT, AND R. P. HUEBENER, in *Proceedings, 17th Int. Conf. on Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern et al. (North-Holland, Amsterdam, 1984), p. 431.

For unpublished lectures of symposia, include title of the paper, name of the sponsoring society in full, and date. For journal names, follow the style of *Chemical Abstracts Service Source Index*, 1980. Abbreviation of AEC Laboratory Report names should follow the style of *Nuclear Science Abstracts*.

**Footnotes.** Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double spaced.

**Figures.** All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page. The **original** figures are required. Copies are **unacceptable**.

Plan figures to fit the proportion of the printed page. Use a professional lettering set on the original so that the letters and numbers are large enough and "open" enough to take a reduction of 50 to 60% without filling in with ink. Do not include background grids; however, on paper with blue lines the grid can be eliminated in the process of photoreproduction. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

**Proofs.** Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

**Reprints.** Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.

### Notes

Short notes regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.

# We Asked 400 Experts To Define Physical Science.

## They Did.

### The **Encyclopedia of Physical Science and Technology**.

Matchless in quality and scope, this monumental 15-volume work provides commanding coverage of every major aspect of physical science and technology.

Over 400 original articles—written by eminent authors from education and industry—give clear, current, and comprehensive descriptions of every subject. The articles and their authors have been selected by a world-renowned executive advisory board made up of many of the major figures in the sciences and engineering disciplines, including recipients of the Nobel Prize, the National Medal of Science, and other awards.

This unique source, the first to encompass all aspects of the physical sciences, is a complete techni-

cal library. Its vast treatment includes:

- 4.5 million words on 9600 double-column pages
- 5500 illustrations
- 1500 tables
- 4000 glossary entries
- 3300 bibliography entries
- 45,000-entry subject index in Volume 15.

The **Encyclopedia of Physical Science and Technology** will be coming soon. Take advantage of this special pre-publication announcement and *save \$400.00*. Plan your purchase now!

For more information, contact Bob Martin at (305) 345-2747, or write to: Academic Press, ATTN: Marketing Department, Orlando, FL 32887-0405 (please include your name, title/position, address, and phone number).

# *New Findings in Atomic and Electron Physics*

## **Atomic Collisions and Spectra**

**U. FANO and A.R.P. RAU**

Provides detailed, unified coverage of atomic spectra and collision research and clarifies the many new conceptual schemes developing in the field. Important new information is presented on multichannel quantum defect theory, its short- and long-range parameters, and its implementation for data analysis and hyperspherical calculations for many-electron systems.

*In Paperback*

**March 1986, 424 pages**

**\$49.95/ISBN: 0-12-248461-4**

**\$75.00/ISBN: 0-12-248460-6 — Casebound**

## **Precision Frequency Control**

**Volume 1**

**Acoustic Resonators and Filters**

**Volume 2**

**Oscillators and Standards**

*Edited by* **EDUARD A. GERBER and ARTHUR BALLATO**

Reviews the current status of the frequency control field with reference to its origins, and projection of its future trends. Offers a concise compendium of the state of the art and serves as a sourcebook to the properties and capabilities of frequency-control devices irrespective of technological basis.

**Volume 1**

**1985, 434 pages**

**\$60.50\*/ISBN: 0-12-280601-8**

**Casebound**

**Volume 2**

**1985, 460 pages**

**\$60.50\*/ISBN: 0-12-280602-6**

**Casebound**

**\*SAVE WHEN YOU BUY THE TWO-VOLUME SET! Set price for Volumes 1 and 2: \$103.00 (\$121.00, if purchased separately). Set prices are not valid in Australia or New Zealand.**

## **Advances in Electronics and Electron Physics**

**Supplement 17**

**Aberration Theory in Electron and Ion Optics**

**XIMEN JIYE**

*Formulates a universal theoretical basis for electron and ion optics, touching on the most salient points of interest.*

**Contents:** Introduction. The Electron Optical Imaging System and Its Aberrations. The Electromagnetic Deflection System and Its Aberrations. The Electromagnetic Multipole System and Its Aberrations. The Ion Optical System and Its Aberrations. Computer Aided Design of Electron and Ion Optical Systems. Appendix: Additional Recent Publications by the Author (1982-1985). Each chapter includes references. Index.

**1986, 449 pages**

**\$49.50/ISBN: 0-12-014579-0 — Casebound**
